The Punic Wall Interpretation Centre the recent recovery of the remains of the ancient Cartaginian wall which was situated at the entrance to the city, and is one of the few Punic fortifications located on the Iberian Peninsula.

beside the wall you can see the remains of a funerary crypt belonging to the hermitage of Saint Joseph, built during the XVI and XVII centuries. The excavations of both were carried out in 1987 and enhanced in 2003.
audiovisual y sala de exposición / audiovisual and exhibition hall

La cripta / the crypt

Sala de exposiciones / exhibition hall

La murella / the wall

The wall was built following neolithic models. It consists of two parallel walls, made of huge sandstone blocks.

The building designed to protect this important site resembles the dimensions of the Punk Wall, 10 meters high and occupying three floors.
